

RE: 01-278 I want to strongly oppose allowing any further use of the 70 cm amateur band by commercial users. Please heed the argument by the ARRL and others. I operate weak signal on and about 432 mhz as well as 440 to 450 mhz. I also operate a FM repeater on this band. We have to put up with enough interference from "dirty" over-powered paging systems that operate nearby now. How much interference will I have if Fed-EX, UPS, and every other shipper is using these devices? And that won't be nearby, it will be in band.
